

# Take your **child's** health to a better place ...

## A specialised children's health practitioner can help your child achieve, maintain and enjoy good physical and mental health

Our paediatric therapists aim to help your child achieve, maintain and enjoy good physical and mental health. We provide the ideal environment for paediatric health practitioners to collaborate with other paediatric health care professionals, for example a physiotherapist working with a speech therapist. For your child this integrative approach often results in faster, more effective treatment and recovery from a range of conditions. It's through this integrative approach that we achieve the optimal outcome for clients and families.

For babies, toddlers and children through to teenagers we have paediatric therapies in physiotherapy, occupational therapy, speech pathology, podiatry and osteopathy, as well as a specialist developmental paediatrician.

### Developmental paediatrics

If you have concerns about your child's development, learning and behaviour, then a developmental paediatrician may be able to help. They can support parents to enable their child to achieve to the best of their learning potential and to help parents optimise their child's physical and emotional wellbeing.

### Paediatric physiotherapy

Paediatric physiotherapists can help with a variety of conditions in the areas of musculoskeletal, orthopaedic, neurological / developmental and cardiorespiratory health of children. They can help children attain realistic goals, enabling them to achieve their best at home, at school and in the playground.

### Paediatric occupational therapy

Many things can impact on a child's ability to function, whether at school, at home or at play. Paediatric occupational therapists can help with early childhood concerns, from babies who are not reaching their milestones, to school aged children with specific learning and behavioural issues, including sensory processing issues.

## Paediatric speech pathology

Effective speech, language and communication underpin so many other aspects of our children's lives. Our speech pathologists are passionate about helping children and families to overcome a range of speech language difficulties. They provide fun and effective treatment approaches creating positive outcomes and confident communicators.

## Osteopathy for children

Osteopathy for babies and toddlers can be very beneficial as they are still at the moulding stage of development. A child's skeleton is soft so that growth and development can occur, so when working with children a paediatric osteopath will use a light touch to match the sensitive and delicate system of the child.

## Paediatric psychology & behaviour analysis

A paediatric psychologist can help children and families with the psychological aspects of behaviours, illnesses, injuries and chronic conditions. They will work with children and their families to achieve the desired outcome by drawing upon variety of techniques.

## Podiatry for children

The correct development of your child's feet is vital for their future health and wellbeing. A podiatrist can help children with the prevention, diagnosis, treatment and rehabilitation of disorders of their feet, ankles and lower limbs.

## Pilates for children

Childhood health is increasingly being impacted by our culture of convenience and sedentary activity. Increasing numbers of children are developing issues or conditions related to weight, posture, injuries, motor coordination, low tone or musculoskeletal development. Pilates and other body movement exercises can offer a range of benefits to children.
